

Artists **OIL COLOUR**

Buttery and vibrant, our Artist's Oil Colour boasts 119 colours, made from only the finest pigments. We carefully formulate each tone for stability, tinting strength and coverage. Use them thickly with palette knives or brushes, or thin them to a very fine glaze.

Artisan **WATER MIXABLE OIL COLOUR**

These magnificent paints are designed to look and work just like traditional oil paint, but they're a bit special. You can use them without hazardous solvents - they're happy being thinned down and cleaned up with water. They're especially good for artists who share a workspace or don't want solvents in school or at home. We make Artisan Water Mixable Oil Colour in 40 vibrant tones with a thick, buttery consistency so you can use them in a variety of ways. We've added a selection of special thinners, oils and mediums to this range, too.

Griffin **ALKYD OIL COLOUR**

Traditional oils, wonderful as they are, take a very long time to dry. That's why we created our Griffin Alkyds - they dry much more quickly and this means impasto and glazing techniques can be done in a single session. We've created 48 tones and these have a slightly greater level of transparency for increased depth and clarity when glazing. Our Griffins are a bit more fluid in consistency than traditional oils and they dry with a somewhat more reflective surface, too.

Professional **CANVAS**

NEW! Winsor & Newton canvas has recently been reintroduced in two different tiers... Professional and Classic. Every canvas is made to perform:

- Kiln-dried stretcher bars - Rigorously tested to withstand moisture and warping
- Hand-stretched - For best tension and tailored corners
- Balanced absorbency and tooth - Prevents sinking of oil colour and improves adhesion
- Highly pigmented titanium dioxide Gesso primer - Higher coverage and colour performance
- Acid-free and archival - Built to last
- Back stapled with folded uncut corners - Extra cloth availability

The Professional Canvas is unique because every canvas 9"x12" and larger offers the innovative Pro-Stretcher™ device. This stretcher with its patent pending technology makes controlling and perfecting surface tension easy. It is easy to use and will not release.
