

The future of painting has arrived. Artefex Panels

Artists are always innovating. They created some of humanity's first tools. Artists developed supports from available materials, such as stone, wood, and canvas. Today, a wider range of materials are available for artists to use as supports.

The ultimate support for professional artists is available now. Artefex Panels are moisture-resistant, lightweight, and ultra-durable. They are made from a composite of two thin aluminum veneers bonded to a plastic core. They weigh less compared to stretched canvas

and wood panels. They do not warp like wood. Do not tear, sag or buckle like canvas. Artefex Panels come in a wide range of surfaces for every painting and drawing technique—canvas, paper, and primed surfaces.

Artefex Panels—moisture-resistant, lightweight, and ultra-durable. The future of painting is awaiting you.
